

AOC & MMD 2025 Conflict Minerals Report

Table of Contents

- 1. Conflict Mineral Definition**
- 2. Conflict Mineral Management Policy**
- 3. Due Diligence Program**
- 4. Collaboration with ITSCI in 2025**
- 5. Appendix: Smelters or Refinery List**

1. Conflict Mineral Definition

2. In regions with political instability, the trade in minerals can end up funding armed groups, driving forced labour and other significant human rights violations, and enabling corruption and money laundering. The minerals most associated with this are tin, tantalum, tungsten and gold (known as “3TG”). Conflict minerals can be extracted in different conflict-affected and high-risk areas around the world, but is most associated with the mining of 3TG minerals in the Democratic Republic of Congo (DRC) and adjoining countries.

3. Conflict Mineral Management Policy

As subsidiaries of TPV, AOC and MMD source all EPEAT-registered monitors and signage displays exclusively from TPV’s internal manufacturing facilities. Accordingly, AOC and MMD adopt TPV’s conflict minerals management policy, including the definitions provided in the Innovation & Development (I&D) documentation, the supplier chain investigation and survey processes using RMI CMRT/EMRT templates, and the OECD five-step due diligence framework.

As brand entities, AOC and MMD require conflict minerals controls to be applied across the supply chain for monitors and signage displays. Given the practical difficulty of segregating minerals at the supplier level from those used by TPV, AOC and MMD adopt the complete list of smelters and refiners disclosed in TPV’s annual Conflict Minerals report as their own.

AOC and MMD, as subsidiaries of TPV Technology, are committed to not purchasing raw materials, subassemblies or supplies that are known to contain conflict minerals that directly or indirectly finance or benefit armed groups in the DRC or other CAHRAs (conflict-affected and high-risk areas). TPV strictly prohibits all forms of forced labor, modern slavery and the use of child labor both at TPV and within the supply chain. TPV is also committed to promoting good environmental practices in our own operations and in our value chain. TPV has developed an internal conflict minerals management system to ensure TPV and its suppliers avoid the procurement of conflict minerals.

4. Due Diligence Program

Based on the third edition of the *Organization for Economic Co-operation and Development Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas* (including its supplements on 3TG, referred to in this report as “OECD Guidance”), AOC & MMD have accepted responsible mineral initiative (RMI) that uses an independent third-party audit as RMAP (Responsible Mineral Assurance Process) (OR SIMILAR) compliant smelter/ refiner list since Mar.2020. Based on such RMAP(OR SIMILAR) list which regularly released to RMI members (TPV Technology Limited being the RMI member) AOC & MMD can identify whether the smelters/refiners are conformant or not.

Based on the OECD’s five-step framework for due diligence in the mineral supply chain, AOC & MMD has built its own system.

Step 1: Establish strong company management system

- 1) AOC & MMD has disclosed this conflict mineral report which includes suppliers conflict mineral management requirement on www.aoc.com and www.mmdmonitors.com.
- 2) AOC & MMD has committed not to purchase raw materials, subassemblies, or supplies which we know contain conflict minerals that directly or indirectly finance or benefit armed groups in the DRC or an adjoining country.
- 3) AOC & MMD encourages final supplier/s to cover the conflict mineral management requirement in the purchase contract, and ask to provide investigation of Conflict Minerals Reporting Templates (CMRT)

and EMRT (Extended Mineral Reporting Template) on a yearly basis before each March.

- 4) AOC & MMD Regulation compliance team will confirm that CMRT/EMRT listed smelters/refiners whether being RMAP(OR SIMILAR) conformant comparing with the database from RMI normally before each May. If find any RMAP(OR SIMILAR) nonconformant (NC) smelters/refiners then will notify and chase final assembly to upper stream supply chain till such NC being remedied.
- 5) AOC & MMD actively encourages its employees and other parties to report concerns directly to the through Stefan.vanSabben@tpv-tech.com or Marcella.Klinker@tpv-tech.com. AOC & MMD accepts any positive opinions to minimize procurement risks and increase responsibility to the international community's actions about conflict-free minerals.

Step 2: Identify and assess risks in the supply chain

- 1) Being as brand company of TPV, AOC & MMD accept TPV Procedure of Conflict Mineral Management which includes the supply chain risk review system, identifying the metal parts as high risk if they have either of tin, tantalum, tungsten, gold and Cobalt, identifying the metal parts as low risk if they have no anyone of tin, tantalum, tungsten, gold and Cobalt and identifying the other non-metal parts as no risk.
- 2) According to the above risk identification, AOC & MMD confirms that TPV addresses high and low risk suppliers for due diligence investigation: requires high and low risk suppliers to sign the guarantee letter that not directly or indirectly to finance or benefit armed groups in the DRC or an adjoining country, neither to tolerate nor contribute to human rights abuses that include forced labor, child labor and environmental degradation.
- 3) AOC & MMD rely on the RMAP(OR SIMILAR) compliant smelter list to determine whether smelters/refiners are conflict free or not.
- 4) AOC & MMD double confirm address of the smelters/refiners whether mapping with the country listed in reasonable country of origin inquiry (RCOI). If there is difference then raise it out to the supply chain via purchasing department for correction.

Step 3. Design and implement a strategy to respond to identified risks

AOC & MMD identifies non RMAP(OR SIMILAR) compliant smelters/refiners as high risks. For non RMAP(OR SIMILAR) smelters/refiners regulation, our regulation compliance team will report to the director about the situation and will drive supply chain to make the improvement, or suggests mitigation actions to the non-compliant smelters/refiners to re-enter RMAP(OR SIMILAR) audit program while continuing the trade, or to disengaging with the suppliers when confirming that it is not feasible to mitigate the risk.

AOC & MMD also collaborate with final assemblies to promote suppliers' understanding of using conflict-free minerals being an important item in the procurement scoring program.

Participate responsible mineral initiative annual conference to learn the latest status of mineral condition and the trend in the industry field.

Step 4. Plan an independent third-party audit of the smelter or refiner's due diligence

For AOC & MMD does not purchase materials directly from smelters/refiners, and it is a long supply chain from final assembly to the most upper suppliers, it is difficult for AOC & MMD to arrange such independent 3rd party audit of the smelter or refiners.

AOC & MMD rely on the suppliers' reports to do conflict minerals survey comparing with RMAP database to identify the minerals country of origin and conflict-free status of smelters/refiners.

Step 5. Report annually on supply chain due diligence

From 2019 AOC & MMD reports annually on supply chain due diligence and will continue to update the

smelter/ refiners list on www.aoc.com and www.mmdmonitors.com.

Any concerns about the report please directly send e-mail to Stefan.vanSabben@tpv-tech.com or Marcella.Klinker@tpv-tech.com.

5. Due diligence practice

As subsidiaries of TPV, AOC and MMD accept the CMRT and EMRT investigation results presented in TPV's 2025 Conflict Minerals Report, available at <https://www.tpv-tech.com/admin/Upload/File/20260417092148.pdf>

The CMRT and EMRT results show that, during the review period from December 1, 2025 to March 31, 2026, there are a total of 248 smelters/refineries in TPV's mineral supply chain.

In 2025, the scope of the EMRT was extended to include additional minerals, including nickel, copper, lithium, and natural graphite. Therefore, TPV asked suppliers at the end of 2025 which of these minerals they used, and if so, to identify the relevant smelters/refiners in their supply chain. Based on this investigation, only copper and nickel are used in TPV's mineral supply chain.

TPV's investigation resulted in the identification of 3 copper smelters and 12 nickel smelters in TPV's supply chain. The CMRT has helped to identify 51 cobalt smelters in TPV's supply chain. All smelters are listed in the Appendix to this report. In the reporting period, over 90% of 3TG, and over 75% of cobalt smelters were listed on the RMAP compliant and active list, showing that the smelters were independently assessed against their compliance with the RMAP and similar standards (LMBA, RJC) standards.

6. Smelters/refiners changes management

AOC and MMD are compliant with the EPEAT requirement to have at least 65% of smelters and refiners (SORs) used for 3TG minerals comply with RMAP (or similar) standards. If smelters or refiners are removed from the approved program list, and this change could affect the 65% threshold or alter the status of participating validated smelters/refiners—thereby impacting the conformance calculations previously declared—then such changes are to be disclosed in next annual report.

If an annual report is not published, AOC and MMD will instead issue a signed declaration on our website within 12 months. This declaration will include a list of all identified smelters/refiners, along with any changes in their status.

7. Collaboration with ITSCI in 2025

TPV has been an Associate Member of ITSCI since early 2023 and has since December 2023 actively funded and supported the Ushimbaji kwa Kanuni, heshima na Haki (Supporting Responsible and Inclusive Mining Governance) project, that is implemented by ITSCI the Democratic Republic of Congo (DRC).

Building on previous work funded by TPV's sister companies AOC International (Europe) B.V. and MMD-Monitors & Displays B.V. in ITSCI implementing areas, TPV's engagement introduced new components that further advanced support to artisanal mining communities and strengthened responsible sourcing of tin, tantalum, and tungsten (3T) in the DRC.

The project aims to promote responsible and inclusive artisanal and small-scale mining. The project includes five key components, including awareness-raising about the DRC Mining Code; Occupational Health and Safety (OHS) training; OHS risk monitoring and mitigation; support of women-owned businesses and awareness-raising on gender; and research on disabilities in Artisanal and Small-Scale Mining.

In 2025, the project, originally intended to be implemented in both North and South Kivu provinces, started in the Kalehe and Walungu territories, South Kivu, due to the deterioration of the security situation in North Kivu. Over the course of the year and affected by insecurity challenges, the project was moved first to Kabare territory, followed by a relocation of all project activities to Pangi territory in Maniema province. This shows the adaptability of the ITSCI teams and their commitment to achieving change on the ground, even in volatile operating environments.

The project continued to have significant impact in 2025. This includes:

- 74 awareness raising sessions on the popularisation of the DRC Mining Code combined with Occupational Health and Safety (OHS) awareness-raising reached 3,079 beneficiaries.
- Over 300 booklets and posters were distributed to state services, local authorities and mining representatives for OHS and DRC Mining Code awareness raising.
- 20 awareness-raising sessions on women's rights, the fight against sexual and gender-based violence, and the economic empowerment of women reached 1,784 beneficiaries, including 896 women.
- 25 qualitative interviews (90% in Maniema Province and 10% in South Kivu Province) were conducted with marginalised groups and people living with disabilities. People with disabilities or marginalised were identified and shared their experiences with the project team.

More information about the project and progress made in 2025 can be found in ITSCI's project activity report, available at: <https://www.itsci.org/wp-content/uploads/2026/03/Public-ITSCI-TPV-Project-Annual-Report-2025.pdf>

TPV is proud to partner with ITSCI, an organization that does important and impactful work in sometimes challenging environments. We are very pleased to extend our funding of the project Ushimbaji kwa Kanuni, heshima na Haki for another 3 years, from 2026 onwards, and thereby continue supporting artisanal and small-scale mining communities.

Appendix: 2025 Smelter List

Item	Metal (*)	Smelter Look-up (*)	Smelter Country (*)
1	Cobalt	Anhui Hanrui New Material Co., Ltd.	CHINA
2	Cobalt	Chemaf Etoile	CONGO, DEMOCRATIC REPUBLIC OF THE
3	Cobalt	Compagnie de Tifnout Tiranimine	MOROCCO
4	Cobalt	Dynatec Madagascar Company	MADAGASCAR
